

AI and CGI pipelines:

Accelerating production and transforming quality

Integrating diffusion models, neural rendering, and classic VFX into an industrial workflow.

DMITRII DAK

Generative AI / CGI Specialist

Hardware

RTX 5090 (32 GB VRAM) · 64 GB RAM

Core Stack

ComfyUI (Flux 2 / Qwen Edit / Wan 2.2 / LTX 2.3)

Kling AI · Veo 3 · Seedance 2 · Runway

Blender · Nuke · Houdini · AE · Pr · Ps · Ai

Why does this Roadmap work?

Saving time

-60%

for concept art and texturing

AI generation replaces routine iterations: concepts, textures, and variants are created in minutes instead of days.

Flexibility until the end

Late-stage

edits without re-rendering

Lighting, details, and style can be changed at any stage—diffusion models recalculate only the required layer.

4K quality

Upscale

unattainable by the classics

4K detailing via upscale nodes in ComfyUI yields results superior to classic rendering with the same deadlines.

Stages of work

Stage 1

Analytics and R&D

Analysis of technical specifications, audit of the current pipeline, and creation of a roadmap.

+ TOR / Audit

Notion / Mindmaps / Yonote

Stage 2

AI Production

Generate concepts and assets in Local ComfyUI, MJ or Google Nano Banana.

+ LoRA / .PSD

ComfyUI / Midjourney / Photoshop

Stage 3

CGI and 3D Modeling

Creating geometry and simulations in Blender or Houdini.

+ .blend / .hip

Blender / Houdini

Stage 4

VFX & Compositing

Final layer assembly and technical retouching in Nuke or AE.

+ Layer Projects

Nuke / AE

Stage 5

Installation and Finish

Video editing, color correction, and sound design.

+ Editing sources

DaVinci / Premiere

Этап 6

Delivery & EDU

Team training and web presentation creation.

+ Video Course / Web / .PPTX

Tilda / OBS / PowerPoint

AI Video production

Deep Dive

Technology

Confidential video generation based on motion physics via Wan 2.2 and LTX 2.3 - detailed control of dynamics with intermediate frames.

Wan 2.2 · LTX 2.3

Method

Face swapping via trained LoRA models or dynamic replacement via VisoMaster and FaceSwap LoRA – preserving the facial expressions and lighting of the original.

LoRA · VisoMaster · FaceSwap

Result

Photorealistic footage with virtual stuntmen replaces expensive filming with makeup and stunt doubles while maintaining the acting performance.

4K · PhotoRealistic · On-time

VFX & Compositing

Final layer assembly and technical retouching in Nuke or After Effects.

You get:

-  Layer Projects (Nuke / AE)
-  Files .blend (Blender) и .hip (Houdini)
-  Linked Nodes and Pipeline Documentation
-  Final render in the required resolution

Nuke

After Effects

DaVinci Resolve

Photoshop

Delivery & EDU

Advantageous difference

Training your team to work with the pipeline and creating a complete web presentation are included in the delivery.

Pipeline video course

Web presentation of the project

.PPTX / .HTML materials материалы

Q&A sessions and workshops

Training your team

Choose from a selection that suits your stack and team level:

Tilda

Web Publishing

OBS Studio

Recording and streaming

PowerPoint

Corporate decks

Notion

Team Knowledge Base

ComfyUI

AI pipeline practice

Ready to integrate this pipeline into the current project.

All capacity (RTX 5090) is reserved for R&D and final rendering.

RTX 5090 32 GB VRAM

192 GB RAM

ComfyUI · Wan 2.2 · LTX 2.3
